Short-Cuts

There are several "short cut" commands that can be used all throughout ISPF. The main thing to remember is that they're all accessing the same menu options as if you were going the long route. For example, if you'd like to get to the data set list, you would normally type in ISPF at the READY; prompt then select option 3 Utilities and then from that menu, you'd select option 4 Dslist. The shortcut for this operation is utilized from the READY; prompt as **ISPF 3.4**. The period is used to distinguish between menus. If you're already in ISPF, it would be silly to have to go all the way back to the READY; prompt, so you can simply type in the ISPF menu options on the Command or Option line on any screen in ISPF to be take you directly there. Using the same example as above, if you're several screens deep and need to get back to your data set list, type **3.4** on the Command or Option line. Once you become familiar with all of the options, this will be a breeze!

Here is a list of some other commonly used short cut commands:

2	Edit
3.2	Data Set (Actions such as Allocate)
3.3	Move/Copy a Data Set
3.4	Data Set List

Quick Reference Guides

Each SDWIS/FED Quick Reference Guide is a stand-a-lone entity to be used by anyone who requires access to the SDWIS/FED information.
